ANIMAL FEED SPECIALISTS

Rumen Rocket Meal

INFORMATION SHEET

Contains Bovatec®

Leading Animal
Nutrition for over

10
YEARS

Rumen Rocket Calf Meal, developed by Miro Feeds Ltd, contains the goodness of whole and coarse ground grains, promoting early intake and rumen development. The larger grain particles allow for the slower release of carbohydrates which assist the development of the intestinal villi and wall.

TYPICAL ANALYSIS (on a DM Basis)

Protein	18%
Energy	12.8MJME/kg

Ingredients selected from: Coarse ground Maize, Whole Barley, Dried Distillers Grains, Soybean Meal, Peas, Molasses, Lime, Salt, Minerals and Bovatec®

Contains Bovatec® (ACVM#A9679) at 500mg/kg of feed for the control of coccidiosis in ruminants. Feed continuously as the only ration. Care must be exercised when feeding concurrently with other antimicrobials. Do not exceed recommended dose rates. Not to be used for single dose treatment. Withholding period: Meat nil.

DO NOT ALLOW dogs, horses or other equid access to feeds containing Bovatec® as ingestion to these species may be fatal.

General Recommendations

- Keep all feeding and mixing equipment clean and sterile.
- Store open bags of milkpowder in dry, cool and rodent free environments to avoid spillage and contamination.

Why feed a grain supplement?

One of the most important aims of good calf rearing is the early development of an efficient rumen. The most efficient method of achieving this is the early introduction of a grain supplement. This encourages the proliferation of beneficial bacteria, which in turn produce volatile fatty acids (VFA).

These VFA's promote rumen wall growth and development.

Feeding Guideline

- Feed ad-lib ensuring fresh meal is available daily.
- Straw or hay can be introduced from 3 weeks. Ensure that meal consumption is not affected when this fiber is added to the diet. If meal consumption decreases with the addition of hay/straw then pull back the quantities of fiber available. This is important because the meal is the primary ingredient responsible for rumen development.
