## No Frills Calf Milk Replacer

INFORMATION SHEET

Leading Animal  
Nutrition for over

**10**  
YEARS

**Miro No Frills Calf Milk Replacer** is a quality blend of New Zealand milkpowders. **Miro No Frills Calf Milk Replacer** is a non-curding, highly digestible, quality milkpowder suitable for calves from 3 to 4 weeks old that are ruminating.

To encourage rumination a calf should have access to a high quality grain supplement from 5 days of age. At 3 to 4 weeks they should be consuming approximately 750 grams of grain supplement per day. Cud chewing and a change in the colour of their faeces are clear indications of rumination.

### TYPICAL ANALYSIS\*

**Protein**                      **24%**

**Fat**                              **20%**

\*Due to ingredient variability typical analysis should be used as a guide only.

Ingredients selected from: Wholemilk Powders, Skimmilk Powders and Nutritional Powders.

### General Recommendations

- Keep all feeding and mixing equipment clean and sterile.
- Store open bags of milkpowder in dry, cool and rodent free environments to avoid spillage and contamination.
- Good quality meal and clean water must be made available ad-lib at all times.
- Extra nutrition may be required in periods of adverse weather and/or if no warm, dry and draft free shelter is available.
- Consult your veterinarian for any signs of disease, fever, parasites, etc.

### Mixing Instructions

- Please refer to table below for mixing rates.
- In container add milkpowder to half the required volume of clean fresh water. Agitate to fully dissolve and mix to a smooth & creamy consistency.
- Top up to required volume with clean fresh water. Note that adding powder on top of the required volume of water will result in a diluted solution as the powder displaces the water level and will result in more liquid than the original volume needed. Feeding this diluted solution will not provide the animal with its daily nutritional requirement.
- Aim to feed milk at body temperature (38-40°C) Use a thermometer if unsure.

### Daily Feeding Guide

When changing powders it is important to do so gradually to minimize digestive disturbances. Mix 50% **Miro Mix Calf Milk Replacer** with 50% **Miro No Frills Calf Milk Replacer** for the first 3 days of changeover.

Calf Age	Litres of liquid milk per calf per feed and mixing rate	No. of feeds
Week 3 - 4	2 Litres at 300g per litre <b>Made with 50% Miro Mix CMR /50% No Frills CMR</b>	1
Week 3 or 4 to weaning	2 Litres at 300g per litre	1

When the calf is consuming a minimum of 1kg grain supplement per day, and weighing at least 65kgs, the weaning process can be initiated.
